

Student Presentations in Math 4303

Eight groups of three students each will present the material in one unit of Chapter 4. Each group will be responsible for 50 minutes of class time. The presentation should consist of assigning homework beforehand, giving an overview of the important material in the assigned section of the textbook, and letting other students in class present the homework exercises. The student group is also responsible for critiquing the solution of the homework exercises.

Each student group will meet with me for a “trial run” (see deadlines below). At that time the group will also turn in a one-page lesson plan describing the content of the lesson (including a detailed time plan) and explaining their choices of the selected material and homework assignment. It is the responsibility of the student group to contact me about setting up a meeting time for the trial run. Please note that I will not be on campus from November 8 to November 12.

The presentation grade will account for 25% of your class grade. The student group will be graded as a group. All group members must be present at the trial run and the actual presentation. Any violation of this rule will result in a substantially lower grade for the whole group. All group members must contribute to both the trial run and the presentation in equal parts. If members of a student group feel that one member is not contributing in a meaningful way, they can ask me to remove the student from their group.

The student group will be graded foremost on mathematical correctness and mathematical clarity of their lesson. Please consult the *grading rubric* for more details.
